

Discover Forage Flexibility with Double Team™ Sorghum Cropping Solution for Silage

Grow Sorghum Silage, Not Grassy Weeds

Controlling your input costs while maintaining high-quality silage is critical to your bottom line. Sorghum used for silage, while more drought-tolerant than corn, has lacked the in-season grassy weed control crucial to maintaining highly nutritious and digestible silage for your herd. Introducing the new Double Team Sorghum for Silage with FirstAct™ herbicide to increase bottom-line ROI, improve animal digestibility, and provide greater flexibility for your silage program.

Increase Your ROI

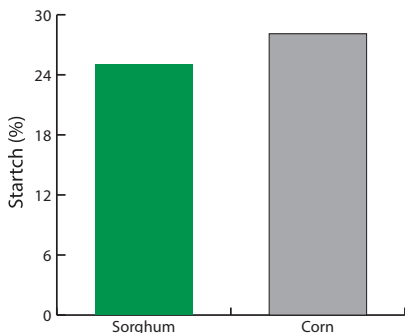

Double Team Sorghum for Silage not only provides cleaner fields and higher yields of highly digestible silage, it also has lower production costs, resulting in an improved ROI versus corn. Additionally, Double Team Sorghum performs well in challenging environments, including where water is limited. Double Team Sorghum for Silage yields similar to corn while using 30% less water, improving your cost position.

Highly Digestible Sorghum Silage for Your Herds

Powered by the DT[®] Trait, Double Team hybrids have been developed to be tolerant to FirstAct herbicide, giving growers an integrated, in-season grass-control solution that makes sorghum a viable and nutritious option for silage. Your livestock benefit from the improved digestibility of grassy weed-free sorghum that is available at a more cost-efficient price than corn silage.

Sorghum silage offers comparable starch levels as corn silage allowing nutritional flexibility within your feed program.³

Greater Feed Program Flexibility

Double Team Sorghum for Silage maximizes your ration options to support nutrient intake for milk production, growth and reproduction for your animals. With this flexibility, you can tailor your silage to meet the changing nutritional needs of heifers and cow calves giving you the peace of mind that you are adequately addressing nutritional needs at a cost that provides an improved ROI for your bottom line.

Now available through select local seed dealers – just ask for Double Team Sorghum Silage with FirstAct herbicide.
